## AS9100 Revision D – QMS Pre-Assessment

*Pre-assessment is used to identify any last steps necessary for registration.*

**(This service is needed to determine readiness for registration)**

This is an audit/review of your company's Quality Management System and its processes prior to the actual AS9100 D assessment by a Registrar. The objective is to determine your company's readiness for registration by determining if all the requirements found in the AS9100 D Aerospace Standard have been met and are effective.

### **Objectives:**

- The objective of a pre-assessment is to determine the company's readiness for registration by ensuring all of the requirements found in the AS9100 D Aerospace Standard have been met and are effective.
- This audit is very similar to an actual certification audit by a Registrar.
- Findings will be documented and corrective actions will be discussed for correction.
- **The pre-assessment audit activities can be used as one of the company's required internal audits.**

### **Upon completion, the company will;**

- Be assured they are ready for AS9100 D registration;
- Have a complete audit of company's QMS processes against the Standard;
- Have any non-conformances documented with corrective actions determined; and,
- Incorporate the pre-assessment audit into company's internal audit program.
