IATF 16949:2016 Revision – QMS Pre-Assessment

Pre-assessment is used to identify any last steps necessary for registration.

(This service is needed to determine readiness for registration)

This is an audit/review of your company's Quality Management System and its processes prior to the actual IATF 16949 assessment by a Registrar. The objective is to determine your company's readiness for registration by determining if all the requirements found in the IATF 16949 Automotive Standard have been met and are effective.

Objectives:

- The objective of a pre-assessment is to determine the company's readiness for registration by ensuring all of the requirements found in the IATF 16949 Automotive Standard have been met and are effective.
- This audit is very similar to an actual certification audit by a Registrar.
- Findings will be documented and corrective actions will be discussed for correction.
- **The pre-assessment audit activities can be used as one of the company's required internal audits.**

Upon completion, the company will;

- Be assured they are ready for IATF 16949:2016 certification;
- Have a complete audit of company's QMS processes against the new Automotive Standard, IATF 16949:2016;
- Have any non-conformances documented with corrective actions determined; and,
- Incorporate the pre-assessment audit into company's internal audit program.

For more information about holding this class at your company, or to attend one of AKA's other class offerings, contact Advantage Kentucky Alliance.
