Note that this service is typically 5-8 floating days; establishing required Processes, identification of the Context of the Organization, and understand and establishing Risk and Opportunities.

ISO 9001:2015 – Establishing & Implementing

Similar to a Lean or growth transformation, a Quality Management System transformation requires activities to establish and implement lasting and sustainable change. This program includes the necessary education and training, consulting, and implementation guidance needed to take a company through the complete implementation of an ISO 9001:2015 Quality Management System.

While implementation effort is dependent upon the size of the company, the number of processes and product lines, management support, and even multiple manufacturing locations, establishing and implementing a compliant ISO 9001:2015 Quality Management System will typically take 5 - 8 days spread over several months when combined with the other necessary QMS programs (ISO9001:2015 Overview/Management Review, Internal Auditor Training, Off-site support, and Pre-assessments). Deliverables typically include assistance with:

- 3 - 5 days identification of the context of the organization and its processes;
 - Understanding the organization and its context;
 - Understanding the needs and expectations of interested parties;
 - Determining the scope of the quality management system;
 - Determining processes needed for the Quality Management System;
 - Writing procedures as required to define those processes.
- 1 day establishing leadership commitment;
 - Identification of quality objectives and planning to achieve them;
 - Identification of support and infrastructure needed to support the processes;
 - Verification of knowledge needed to maintain successful processes.
- 1-day understanding and establishing risk and opportunities;
 - Defining actions needed to assess risks and opportunities that are required throughout the ISO 9001:2015 Standard and incorporating them in the company's procedures.
