## Safety 101

Safety 101 is the first step in learning the principles and philosophy of safety within a company. Each company wants to have employees that are ready to “hit the ground running” without “breaking the bank” on safety training. Using instruction lead sessions we provide a hands on approach to learning what safety is, what companies expect to get from good safety, tools that are used to insure we are implementing safety at the source.

Upon completion of this workshop, participants will have the basic principles of Safety and Ergonomics. This basic approach and tools will show them what is expected from a safety specialist and will familiarize them in the tools needed to succeed.

*“Safety First-that’s how you start”*

### Upon completion of the workshop an operator will:

- Understand Why Safety is Important
- Understand what TRR is
- Understand what VPP is
- Be given a safety orientation that will touch on:
 

<i>Blood-borne Pathogens</i>	<i>Confined Space</i>	<i>Electrical Safety</i>
<i>Emergency Response</i>	<i>Environmental</i>	<i>Ergonomics</i>
<i>Haz Com</i>	<i>Lock Out Tag</i>	<i>Machine Guarding</i>
<i>Written PPE Program</i>	<i>Arch Flash Program</i>	<i>Accident Investigation</i>

### Scope of Class

The following learning activities and tools will be delivered:

- Lecture with slide presentation focused on examples and philosophy
- Exercises & Formulas
- Recordkeeping
- How to run emergency drills
- Discussion and interaction
- Question and answer session

The company will provide the classroom and refreshments for participants and the AKA trainer.
